*Nationality: French (EU Citizen – Eligible for Swiss Work Permit B/L without quota delay)*

---

**To:** The Robotics & Systems Engineering Recruitment Team **Date:** [Date of Application]
**Company:** [Target Company, e.g., Logitech / SenseFly / LEM / Sonceboz]
**Location:** Vaud / Geneva / Neuchâtel, Switzerland

**Subject: Application for Embedded Systems & Robotics Engineering Intern (4 to 5 Months – from April 2027)**

Dear Hiring Team,

I am writing to express my strong motivation to join **[Company Name]** as an Embedded Systems and Robotics Engineering Intern. Currently completing my second year of Master of Science in Engineering at **Mines Saint-Étienne (ISMIN)**, I specialize in autonomous systems, microcontroller architectures, and smart sensor integration.

My academic journey is centered on hands-on physical prototyping. Most recently, I led the development of an autonomous self-levelling catamaran. I authored bare-metal C firmware for an **STM32 (ARM Cortex-M)** to run a real-time closed-loop PID control algorithm, designed **custom differential capacitive level sensors** measuring liquid dielectric shifts ($\Delta\epsilon_r$), and modeled the mechanical hull in **Autodesk Inventor**. In parallel, my cybersecurity internship at **Valeo** gave me deep insight into communication bus robustness (CAN, LIN) and sensor data integrity in safety-critical electronic control units.

Switzerland's global leadership in microtechnology, advanced robotics, and precision instruments represents the exact environment where I wish to build my career. **[Company Name]**'s reputation for engineering elegance and mechatronic excellence makes this opportunity the ideal place to apply my skills.

In addition to technical competencies, I offer multilingual fluency: native French, bilingual English (C2 – IGCSE & A-Levels), certified Spanish (C1), certified Chinese (C1 – HSK 3), and beginner German (*Nicos Weg*). As Treasurer of Junior Mines Provence, I successfully managed project budgeting and fiscal audits with high accountability. As an EU citizen, my Swiss B/L work authorization involves a streamlined, quota-free process.

Available starting **April 2027 for a duration of 4 to 5 months** (fully fulfilling the 16-week French CTI accreditation requirement), I would be delighted to discuss how my hands-on prototyping skills can contribute to **[Company Name]**'s engineering projects. Thank you for your time and consideration.

Sincerely,

**Théodore Hesling**
MSc Engineering Student – Mines Saint-Étienne (ISMIN)
